

# Info 1213 (R95) - Course Project

Howard Chen

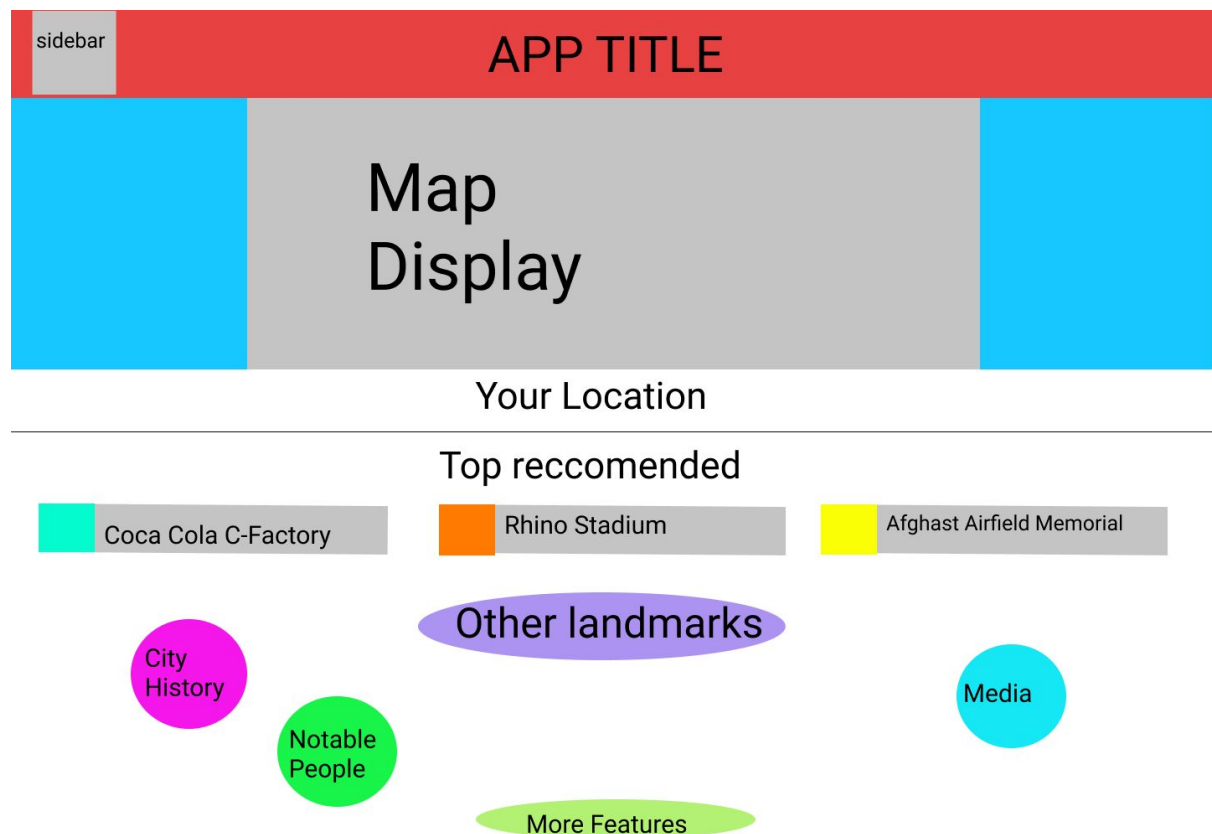

## Description of the business

My business is an encyclopedia on tour, for people who want to learn the local history of whatever city or town you are currently at. Ideally I would make a website or app in collaboration with travel companies, local museums and culture societies, sponsored by local companies or corporations that give tours, and I would draw customers from tour groups that promote the app, solo travellers who stick to their own explorations and schedules, and even locals who are interested in history and cheap trips. **THIS BUSINESS DOES NOT PROVIDE HOTEL BOOKINGS**, however, as many hotels double as attractions, it would not be difficult to book a tour of a hotel and while you're there book a room as well.

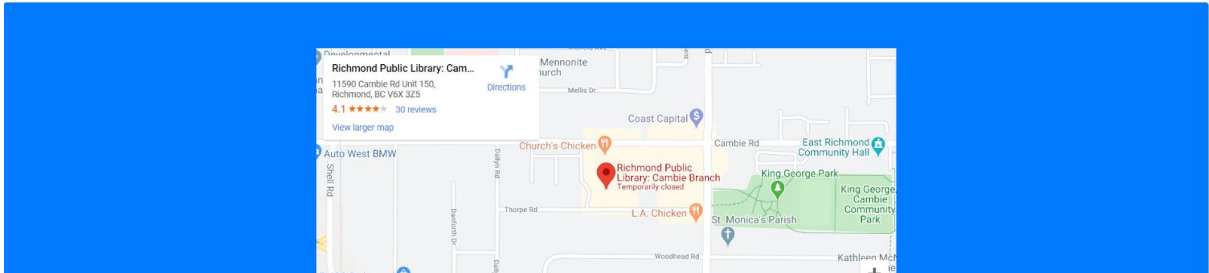

Summary: A guide that tells you all about where you are and what local attractions reside in your location.

## Wireframes and Websites

Wireframe 1

Website page 1 (1st half)

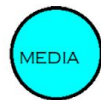

Website page 1 (2nd half)

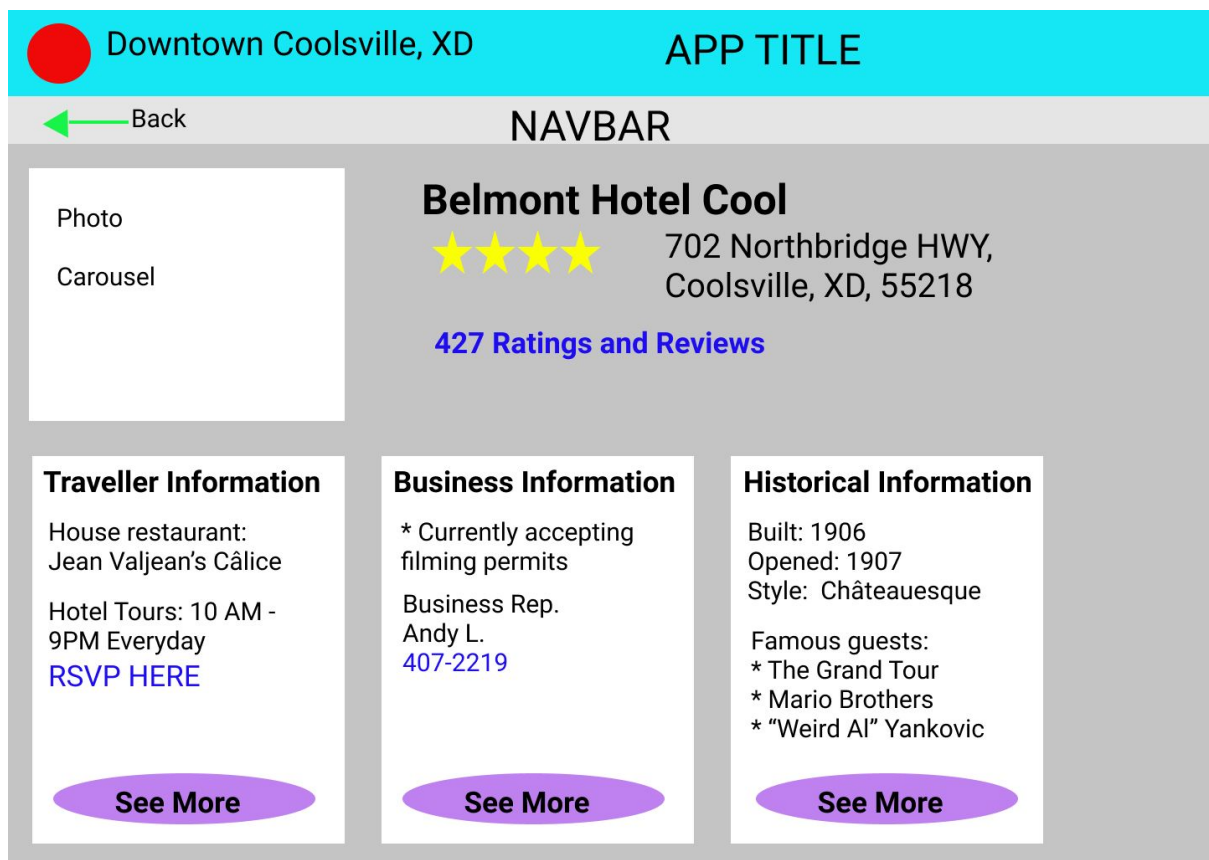

### Top Reccomended

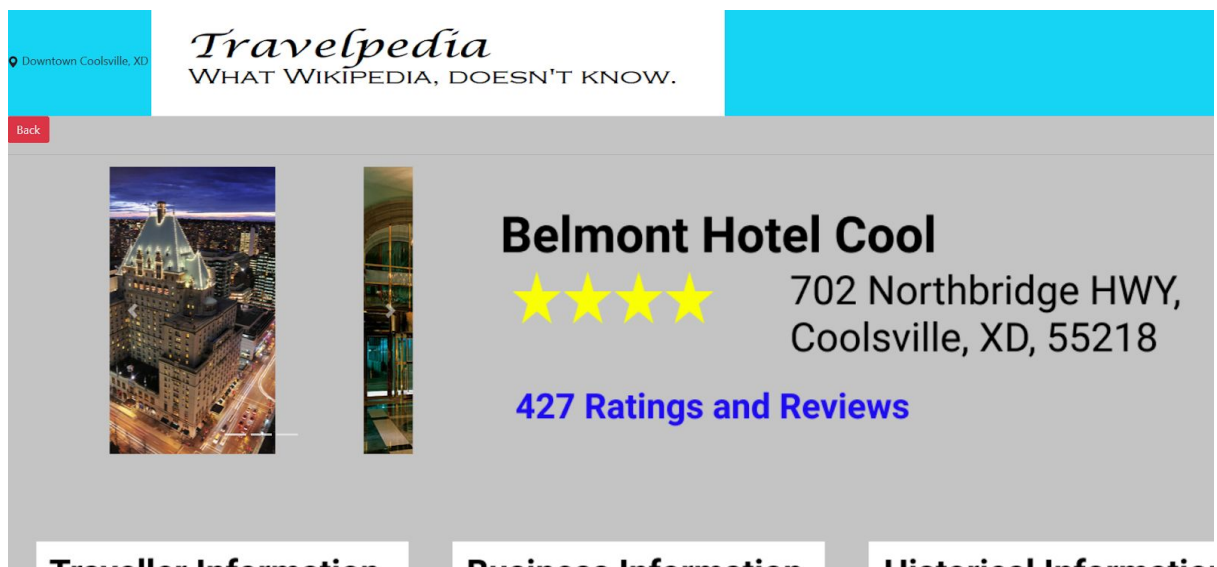

Coca-Cola C Factory Rhino Stadium Afghast Airfield Memorial Belmont Hotel Cool

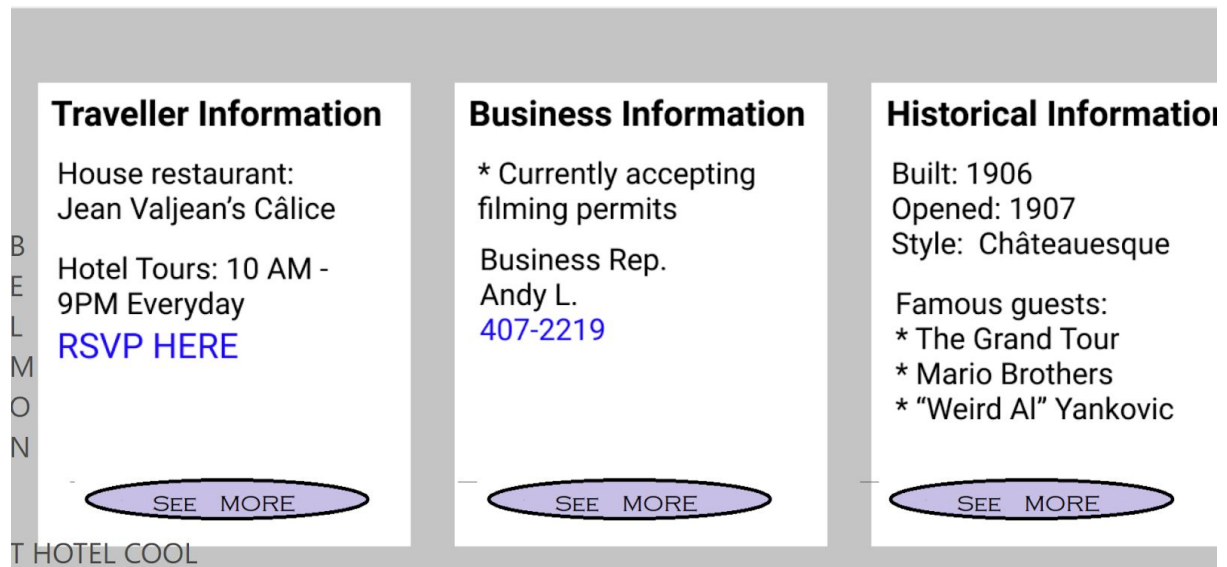

## Wireframe 2

## Website page 2 (1st half)

## Website page 2 (2nd half)

I will be the first to admit that I am not a designer, and as such, everything looks primitive. For that, I apologize greatly. You may notice the sidebar on the first page, it actually opens overhead, and is a way to contact me the developer. Rather than completely use the conventional bootstrap buttons, I created my own set of buttons and used them alongside the bootstrap buttons. I've also used the embed feature provided by sites such as Google Maps and YouTube (also owned by Google) to add more visuals to my website. On the second page I used an icon from bootstrap's list of icons.

## **How to access this site on GoormIDE**

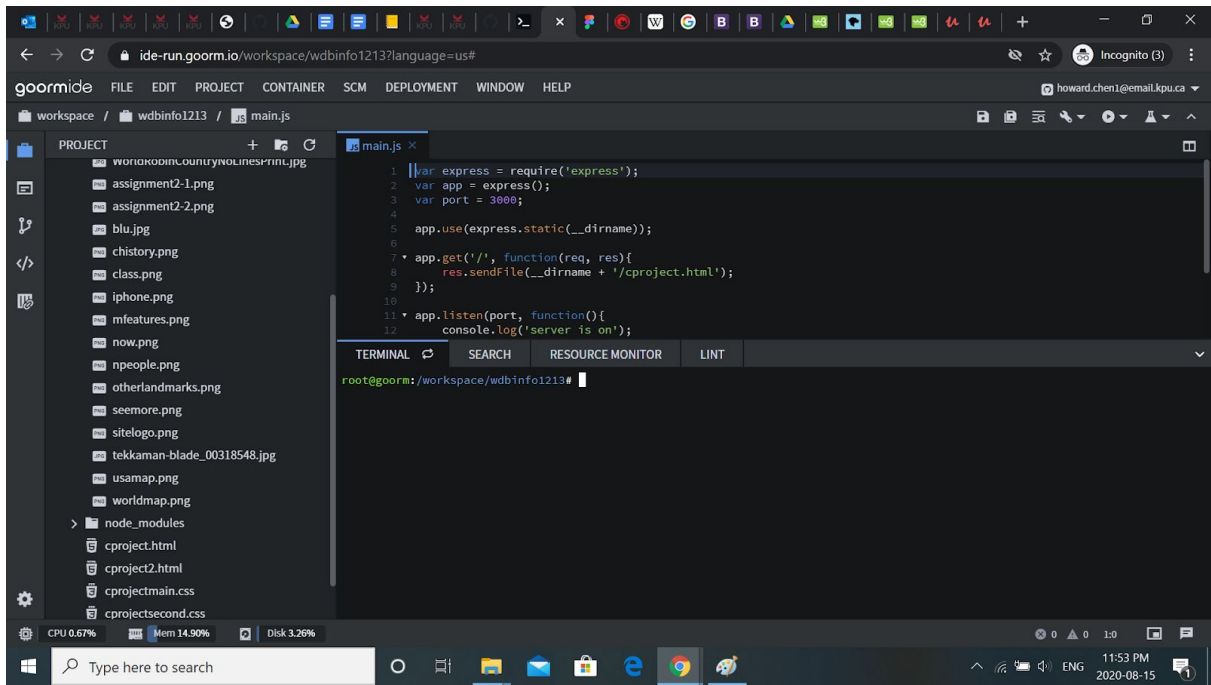

Before you even do anything with GoormIDE, please access the github repository link and download the image media.png (it's an icon that I accidentally left out and GoormIDE refuses to let me add it)

<https://github.com/Howard809/info1213courseproj>

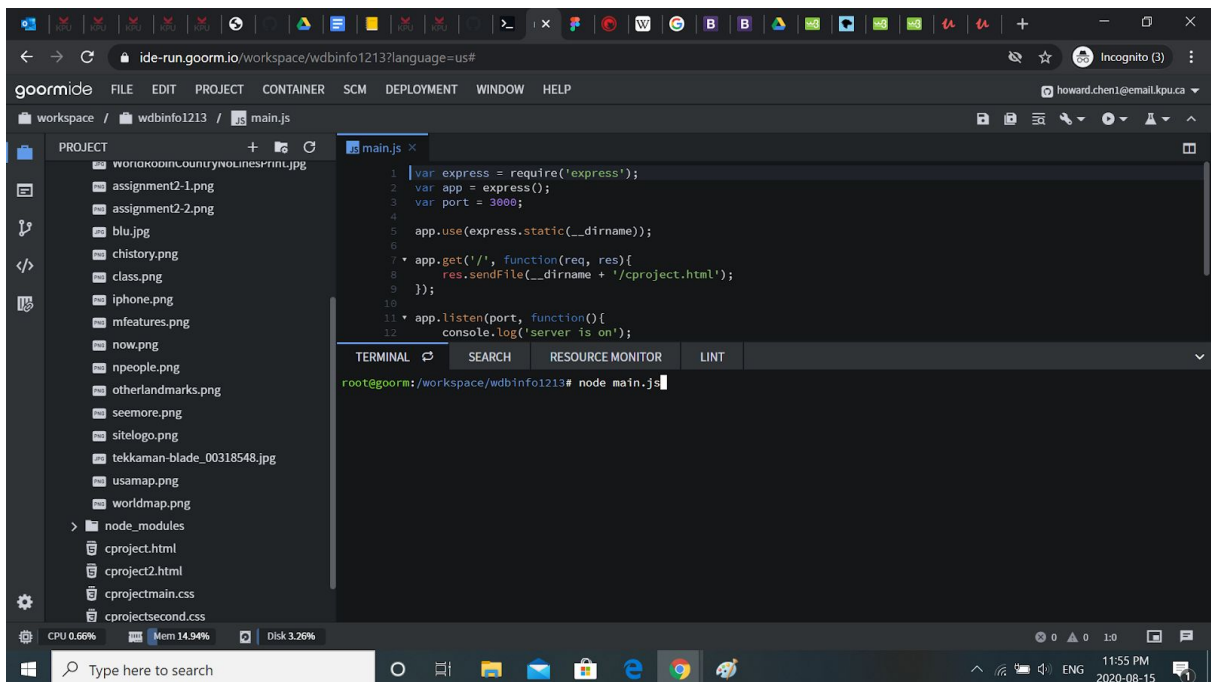

1. Open the GoormIDE link

<https://goor.me/CZezu>

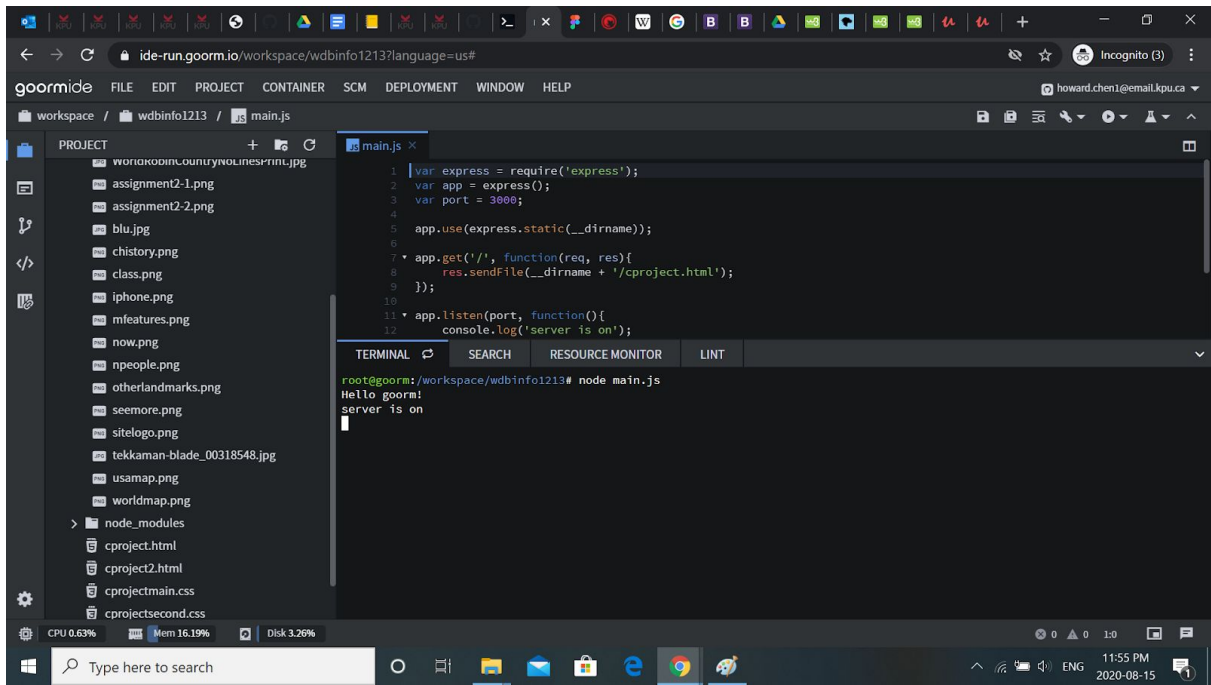

2. Drag media.png into the image folder

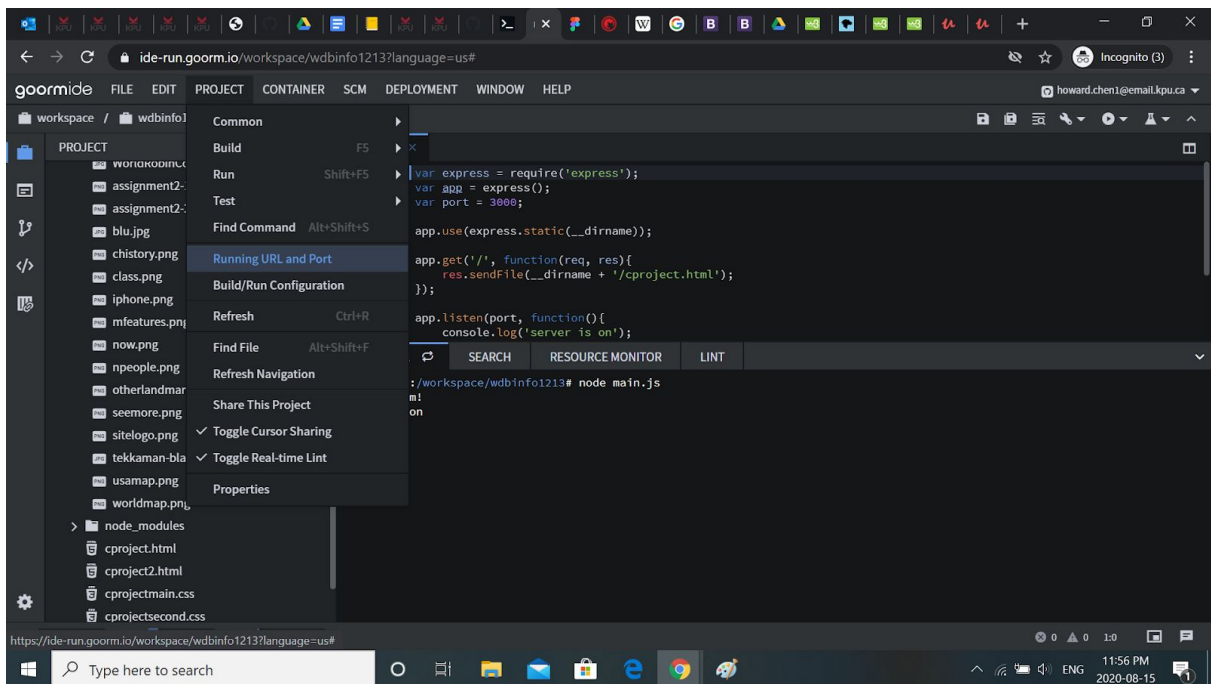

### 3. Type "node main.js" in the terminal

### 4. Receive response

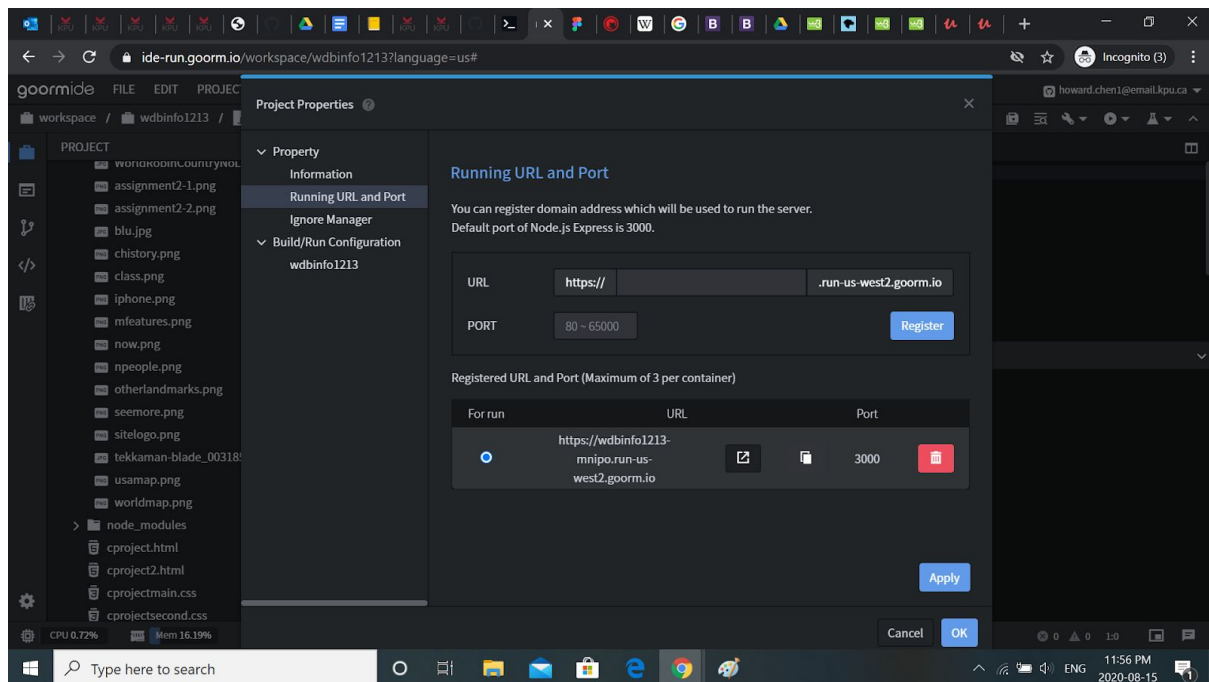

## 6. PROJECT/Running URL and Port

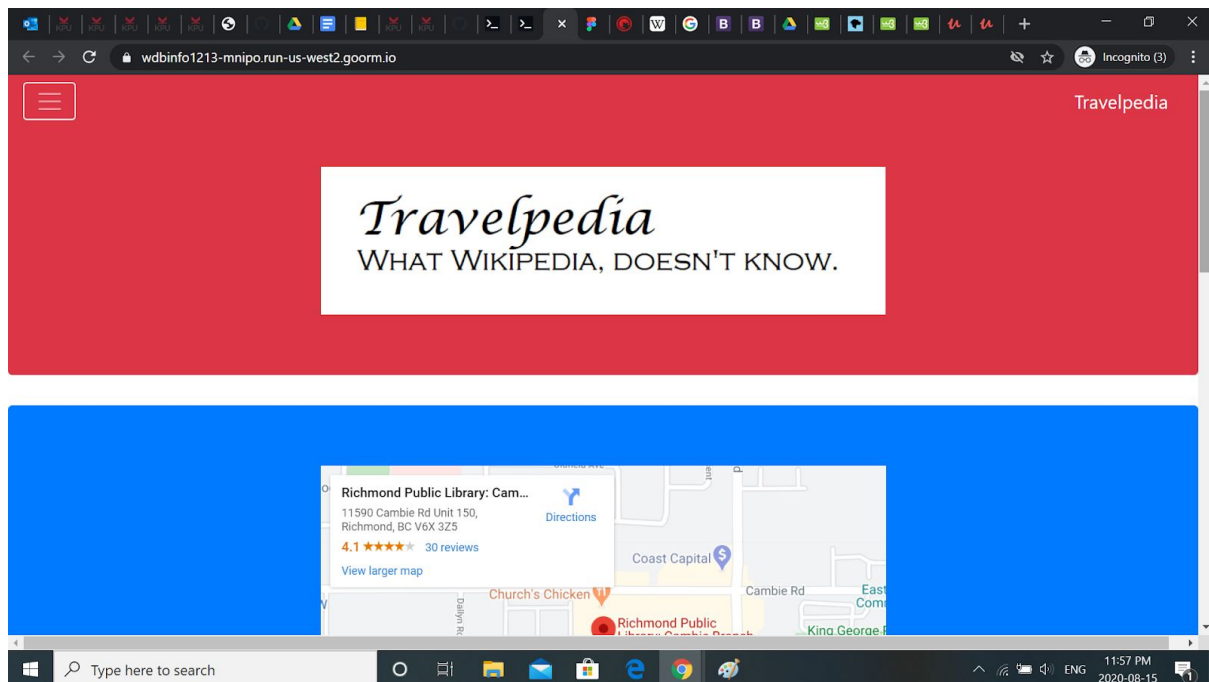

## 7. Press the pop-up button to access the website in a new tab

## 8. Success

## Features/Content Explanations

- Bootstrap buttons, jumbotron, containers, grid, flexbox, navbar, carousel
- Embed
- Action (external links)
